Foreword ix
Acknowledgements x

Section One: Oxidative Stress and Hepatocyte Damage

Introductory remarks 3
S. Orrenius

Arylation and oxidation in paracetamol-induced hepatotoxicity 5
B. S. Andersson, M. Rundgren, D. J. Porubek, P. Nicotera, S. D. Nelson and P. Moldéus

t-Butylhydroperoxide (*t*-BuOOH) toxicity in hepatocytes during hypoxia and anoxia 13
D. P. Jones, T. Y. Aw, D. L. Tribble and X. Shan

Alterations in hepatocyte cytoskeleton during the metabolism of quinones 21
G. Bellomo, H. Thor, F. Mirabelli, P. Richelmi, G. Finardi and S. Orrenius

Role of Ca^{2+}-activated catabolic processes in cell killing 37
P. Nicotera, D. J. McConkey, J. M. Dypbukt, D. P. Jones and S. Orrenius

Increase in cytosolic free calcium and its role in the pathogenesis of hepatocyte injury induced by carbon tetrachloride 45
E. Albano, R. Carini, M. Parola, G. Bellomo, G. Poli and M. U. Dianzani

Lipid peroxidation and antioxidant systems in the liver injury induced by glutathione depleting agents 55
A. F. Casini, E. Maellaro, B. Del Bello and M. Comporti

Hepatocyte damage induced by carbon tetrachloride and 1,2-dibromoethane mixture: role of lipid peroxidation and GSH depletion 63
O. Danni, M. Aragno, F. Biasi, E. Chiarpotto, A. Comoglio and G. Poli

Role of aldehydes in the propagation of lipid peroxidation-induced liver toxicity 73
G. Poli, E. Chiarpotto, F. Biasi, G. Leonarduzzi, A. Comoglio, E. Albano and M. U. Dianzani

Effects of free radicals on hormonally- and non-hormonally-regulated calcium homeostasis in rat livr microsomes and hepatocytes 83
F. B. Pruijn and A. Bast

Mechanistic aspects of the 1,2-dibromoethane-induced mitochondrial GSH depletion *in vitro* 99
B. Botti, V. Franceschini, A. Tomasi, V. Vannini and A. Masini

Suicidal inactivation of haem by halothane 107
M. Manno

Iron release, lipid peroxidation and haemolysis in glutathione-depleted erythrocytes 117
M. Ferrali, L. Ciccoli, B. Del Bello and M. Comporti

Section Two: Free Radicals and Liver Cancer

Introductory remarks 129
M. U. Dianzani

Choline deficiency: A new model for the study of the roles of free radicals in liver carcinogenesis 133
E. Farber and A. K. Ghoshal

Genotoxic effects of 4-hydroxyalkenals 141
P. Eckl and H. Esterbauer

Evaluation of methylglyoxal genotoxicity in the rat using the micronucleus assay in liver and bone-marrow cells 159
A. Martelli, A. Allavena, M. Ottonello and U. M. Marinari

Lipid peroxidation in liver tumours and regenerating liver 165
K. H. Cheeseman, S. Emery, S. P. Maddix, K. Proudfoot, G. W. Burton, K. U. Ingold and T. F. Slater

Possible role of free radicals in liver regeneration 177
L. Lambotte, Y. d'Udekem, F. Lambert, M. Amrani and J. Dubois

On the question of membrane-lipid peroxidation in the liver of rats fed a choline-devoid diet 187
S. Banni, R. E. Basford, F. P. Corongiu and B. Lombardi

Iron-enhancement of the hepatic porphyria and cancer induced by environmental polyhalogenated aromatic chemicals 203
A. G. Smith, J. E. Francis, J. R. P. Cabral, P. Carthew, M. Manson and F. P. Stewart

Section Three: Free Radicals in Chronic Liver Diseases

Introductory remarks 217
T. F. Slater

Inducible bilirubin oxidase in the microsomal fraction of rat liver 229
T. Trenti, F. De Matteis, J. B. Greig and A. H. Gibbs

Free radical-related liver mitochondrial damage following experimental chronic iron overload 235
H. Rouach, C. Ribière, P. Brissot and R. Nordmann

Cumene-hydroperoxide induced cell damage and death in biliary epithelial cells 245
M. Parola, K. H. Cheeseman, M. E. Biocca, M. U. Dianzani and T. F. Slater

Ethanol-inducible cytochrome P450 (IIE1) in alcohol-mediated toxicity 255
M. Ingleman-Sundberg, I. Johansson, G. Ekström, T. Cronholm, C. Norsten, E. Eliasson, Y. Terelius, N. Tindberg, M. J. J. Ronis, J. A. Handler, R. G. Thurman, Å. Johansson and A.-L. Hagbjörk

Role of free radicals in ethanol-induced acute hepatotoxicity 261
M. Younes and O. Strubelt

Lipid peroxidation in experimental liver cirrhosis 269
R. Dargel, T. Zimmermann, D. Mueller, H. Franke and M. Kretzschmar

The role of lipid peroxidation and antioxidants in alcoholic liver disease in man 275
S. Moscarella, R. Mazzanti and P. Gentilini

Section Four: Antioxidant Defences in Liver Injury

Introductory remarks 283
H. Sies

Calcium and oxidative stress in the hepatocyte model for cell injury 285
D. J. Reed and C. E. Thomas

Phospholipid hydroperoxides, microsomal membranes and cytochrome P-450: damage, disassembly and utilization 301
V. E. Kagan, E. A. Serbinova, M. B. Kadiiska, V. Z. Lankin and T. S. Stoytchev

Antioxidant effects of ascorbate and glutathione in microsomal lipid peroxidation are dependent on vitamin E 309
H. Wefers and G. Sies

To inhibit iron dependent microsomal lipid peroxidation vitamin E requires the continuous enzymatic reduction of membrane hydroperoxides 317
M. Maiorino, M. Coassin, A. Roveri and F. Ursini

Ascorbyl radical is detected in rat isolated hepatocytes suspensions undergoing oxidative stress: an early index of oxidative damage in cells 325
A. Tomasi, E. Albano, A. Bini, A. C. Iannone and V. Vannini

Effect of vitamin E on the carbon tetrachloride-induced changes of dolichols distribution in rat liver microsomes and golgi apparatus 335
M. A. Pronzato, D. Cottalasso, C. Domenicotti, U. M. Marinari and G. Nanni

Antioxidant status in alcoholic liver disease 343
R. J. Ward, J. Jutla and T. J. Peters
